

N (10) PRIORITY PROGRAMS OF  
BY DEAN SECRETARY ROY A.  
CMAU

“These initiatives are expected to give fresh Insights and guidance for existing and new industrial players in shifting their business approach into a sustainable system.”

**Noemi A. Paranada**  
Regional Director

## The Carmelray Group conducts an Environmental Forum with EMB Region IVA for its Locating Industries

Industrial parks can generate both economic and environmental gains. Its development is stimulated from two perspectives: sustainable business process and sustainable design of business parks.

Carmelray Industrial Park is one of the leading developers in the Philippines that showed strong commitment to environmental stewardship. Since 1990 it has remained focused towards the integrated building of industrial estates and building environmental infrastructure and services.

This is why last June 26, 2018, the Environmental Management Bureau (EMB) for Region IVA – CALABARZON Region led by Regional Director Noemi A. Paranada visited Carmelray Industrial Park (CIP) I and II in Canlubang, Laguna to award its selected pollution control officers that showed exemplary practices and performance in promoting environmental protection, preservation and sustainability. The awarding was done during the conduct of their

environmental forum for locating industries entitled “Industries for CLEAN and SAFE Environment”. Apart from this, Mr. Joeser F. Santos, President and COO of Carmelray Industrial Corporation was also given a plaque of recognition for his exemplary leadership and commitment to the protection and preservation of the environment.

The recognition of the different locators on their efforts was a way to encourage them to continue on taking on different actions and innovations that shall promote environmental sustainability in their organization. Likewise, it serves a way to acknowledge the efforts of the industrial parks in complying with the environmental laws set to them as well as the support that they provide to the different locators to likewise be able to comply with the Bureau’s requirements.

“These initiatives are expected to give fresh insight and guidance for existing and new industrial players in shifting their business approach into a sustainable system.” said Dir. Paranada. ###
