

Publication of EMB 4A Podcast on Ecobrick Making Webinar

The Environmental Management Bureau (EMB) in Region IV-A (Calabarzon) published the Ecobrick Making workshop in July this year.

Ecobricks are reusable plastic building blocks made of clean and dry used single-use plastics. As plastic is extremely durable, this is leveraged to create a useful building material. Developing countries, such as the Philippines, are using Ecobricks to make affordable modular furniture, garden structures and buildings.

The podcast, launched during the Philippine Environment Month Webinar entitled "Engaging the Youth in Environmental Protection through Webinar on Solid Waste Management and Ecobrick Making Workshop, is aimed to keep the public updated with environmental events.

This podcast, which is powered by Anchor.fm and can be accessed through different platforms like Spotify, Radio Public, Pocket Casts, Breaker, Google and Apple, is also to raise awareness and call for behavioral change among the youth in reducing the waste that goes to the landfill by creating ecobricks out of their residual wastes.

Ecobricks Philippines Founder Rosalie Fuentes, the webinar resource speaker, shared her expertise in making ecobricks and challenged the youth in reducing plastic waste.
